Blinkit Sales & Financial Dashboard

Interactive Excel Dashboard for Sales & Financial Performance Analysis

Tool Used: Microsoft Excel

Author: Kartik | **Project Link:** [Add GitHub / Dashboard Link Here]

Project Overview

This project involved designing an interactive sales and financial performance dashboard for Blinkit using Microsoft Excel. The dashboard consolidates raw transactional data into a single, decision-ready view, enabling faster tracking of revenue, cost, and profitability trends. It was built to simulate the kind of MIS and financial reporting tool a Financial Analyst would use to support data-driven business decisions.

Objective

To build a dynamic, self-service dashboard that allows stakeholders to monitor key business metrics at a glance, drill down into monthly and category-wise performance, and identify actionable trends without manually processing raw data each time.

Key Contributions

- Designed an interactive financial dashboard using Pivot Tables, Pivot Charts, and Slicers to track overall business performance.
- Built KPI cards to monitor Revenue, Cost, Profit, Profit Margin, and Orders in a single consolidated view.
- Conducted monthly and category-wise sales analysis to identify trends and inform business strategy.
- Applied XLOOKUP, SUMIFS, and IF functions, along with Conditional Formatting and Data Validation, to streamline reporting accuracy and reduce manual errors.
- Generated data-driven insights to support strategic and revenue-focused decision-making.

Tools & Techniques Used

Category	Tools / Functions
Data Analysis	Pivot Tables, Pivot Charts, Slicers
Formulas	XLOOKUP, SUMIFS, IF
Data Quality	Conditional Formatting, Data Validation
Reporting	KPI Cards, Dashboard Design

Key Metrics Tracked

Revenue • Cost • Profit • Profit Margin • Orders

Outcome & Impact

The dashboard turned raw sales data into a clear, visual reporting tool that highlights performance trends by month and category. By centralizing KPIs into one interactive view, it reduced the effort needed to interpret business performance and supported more informed, revenue-focused decision-making — reflecting the core reporting and analysis workflow used in financial analyst roles.
